Professional Summary

Java and Spring Boot engineer with around 4 years of production experience at NCR Voyix, building and scaling high-throughput microservices that serve millions of transactions daily. Specializes in GraphQL/REST API design, event-driven architecture, and cloud-native deployments on GCP and Kubernetes — with a track record of delivering latency reduction, QA automation coverage, and faster CI/CD pipelines. Comfortable owning full SDLC cycles and mentoring engineers in distributed-systems design.

Experience

NCR Voyix 07/2022 – Present
Software Engineer 2 *Hyderabad, India*

- Re-architected a **legacy Spring Batch synchronization pipeline** into an event-driven workflow using **Spring Boot** and **Pub/Sub**, cutting end-to-end sync latency.
- Designed and delivered **GraphQL** and **RESTful** microservices with **Spring Boot** and **Hibernate**, introducing optimized N+1-free data persistence layers that reduced average API response time by **35%** and enabled seamless integration across 8 distributed services.
- Migrated file-based data processing to a **Redis**-backed caching and storage layer, redesigning cache invalidation strategies to cut synchronization latency by **50%** and reduce database read load by **40%** under peak traffic.
- Built a **Java** automated testing framework using **JUnit 5** and **Mockito**, integrating contract tests and data-generation utilities that eliminated **60%** of manual QA effort and caught regressions 3x faster in CI.
- Reduced **Maven/Gradle** build times by **40%** through dependency graph restructuring, parallel module compilation, and build cache configuration — cutting CI pipeline feedback loops by 8-10 minutes.
- Integrated **SonarQube** static analysis into **Jenkins** pipelines with quality gate enforcement, reducing production defect escape rates by **30%** and raising code coverage across Spring Boot services.
- Engineered **Docker** and **Kubernetes** (GKE) deployment infrastructure with Helm charts and **GitHub Actions** CI/CD, enabling zero-downtime rolling deployments and reducing release cycle time by **35%**.

NCR Corporation 01/2022 – 07/2022
Software Engineer Intern *Hyderabad, India*

- Containerized and deployed SaaS microservices on **Google Kubernetes Engine (GKE)** using **Docker** and Helm Charts, improving deployment repeatability and reducing environment drift across dev/staging/production.
- Developed backend modules with **Spring Boot** and **PostgreSQL/MongoDB**, contributing to a data persistence refactor that improved query throughput by **25%** under simulated load.

Projects

StockTracker | *Java, Spring Boot, Kafka, MongoDB, REST*

- Architected an **event-driven stock tracking system** using **Kafka** producers/consumers for real-time price streaming and **MongoDB** for time-series persistence, with a mock data generation layer simulating realistic ticker fluctuations for end-to-end pipeline testing without live market dependencies.
- Exposed stock data via a **Spring Boot REST API** supporting filtering, pagination, and real-time price queries — backed by live Kafka stream consumers and MongoDB reads optimized for high-frequency time-series data.

Custom Memory Allocator | *C++, mmap, Google Benchmark*

- Implemented a **custom memory allocator** in C++ with `malloc`/`free` equivalents using a **free-list allocation strategy**, managing heap memory directly via `sbrk`/`mmap` syscalls with real-time **internal and external fragmentation ratio** tracking across allocation patterns.
- Benchmarked the custom allocator against glibc's malloc under allocation-heavy workloads, profiling throughput, fragmentation overhead, and per-operation latency to surface concrete performance trade-offs.

Education

Vellore Institute of Technology 07/2018 – 07/2022
Bachelor of Technology (B.Tech) in Computer Science *CGPA: **8.85 / 10***

Technical Skills

Languages: Java (primary), C++, Python, JavaScript

Frameworks & Libraries: Spring Boot, Spring MVC, Hibernate, JUnit 5, Mockito, GraphQL Java, REST

Databases: PostgreSQL, MySQL, MongoDB, Redis

DevOps & Cloud: Docker, Kubernetes (GKE), Helm, Terraform, GitHub Actions, Jenkins, GCP

Observability: Prometheus, Grafana, SLF4J/Logback, SonarQube

Concepts: Distributed Systems, Event-Driven Architecture, Microservices, TDD, Agile/Scrum
